

# Database Schema Design

Organizing Data

# Databases

# Why you care

SQL is the gateway to the world of Databases

Reading & Writing Raw SQL is a skill that will set you apart from other Devs

Super Important for implementing & debugging advanced Database systems

# Database Schema Design

Good Database Design should:

- Capture state, not behavior
- Design relationships between tables

# State and Behavior

```
class OrangeTree
  def initialize
    @age = 5
    @height = 5
    @oranges = produce_oranges
  end

  def produce_oranges
    Array.new(3) { Orange.new }
  end
end
```

```
class Orange
  def initialize
    @diameter = rand(2..4)
  end
end
```

# State and Behavior

```
orange_tree = OrangeTree.new
```

```
⇒ #<OrangeTree 0x007fe1f1a4fb20  
  @age=5,  
  @height=5,  
  @oranges=[#<Orange:0x007fe1f1a4faa8 @diameter=2>,  
            #<Orange:0x007fe1f1a4fa80 @diameter=4>,  
            #<Orange:0x007fe1f1a4fa58 @diameter=3>]>
```

# Temporary State

- We create objects to hold data
- Data is lost when our program has finished executing

# Temporary State Problems

- What if we want to use the current state later?

# Temporary State Problems

- What if we want to use the current state later?

Mega Man vs. Mega Man II

Phone number from a super hot crush

50 million client purchase records

# Persistent State

- To keep current state we need to save the data

# Persistent State

Where to save it?

CSV

Pen && Paper

😊Database😊

# Databases

- Like object-oriented programming, databases model the data in real world systems

# Databases and Ruby

- How do objects in databases relate to Ruby?

# Databases and Ruby

Modeling State	
<i>Ruby</i>	<i>Database</i>
<i>Classes</i>	
<i>Instances of classes</i>	
<i>Instance variables</i>	

# Databases and Ruby

Modeling State	
<i>Ruby</i>	<i>Database</i>
<i>Classes</i>	<i>Tables</i>
<i>Instances of classes</i>	
<i>Instance variables</i>	

# Databases and Ruby

Modeling State	
<i>Ruby</i>	<i>Database</i>
<i>Classes</i>	<i>Tables</i>
<i>Instances of classes</i>	<i>Rows</i>
<i>Instance variables</i>	

# Databases and Ruby

Modeling State	
<i>Ruby</i>	<i>Database</i>
<i>Classes</i>	<i>Tables</i>
<i>Instances of classes</i>	<i>Rows</i>
<i>Instance variables</i>	<i>Fields</i>

AKA: Schema

# Schema Design

```
orange_tree = OrangeTree.new
```

```
⇒ #<OrangeTree 0x007fe1f1a4fb20  
  @age=5,  
  @height=5,  
  @oranges=[#<Orange:0x007fe1f1a4faa8 @diameter=2>,  
             #<Orange:0x007fe1f1a4fa80 @diameter=4>,  
             #<Orange:0x007fe1f1a4fa58 @diameter=3>]>
```

# Schema Design

orange_trees
<i><b>id</b></i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i><b>id</b></i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

orange_trees
<i>id</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>diameter</i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>name</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>diameter</i>
<i>created_at</i>
<i>updated_at</i>

# Schema Design

- Schema is more than just static tables
- Relationships are kinda of a big deal

Types of Relationships:

- One to One
- One to Many
- Many to Many

# Schema Design

- What is the relationship between orange trees and oranges?

# Schema Design

- What is the relationship between orange trees and oranges?

An **orange tree** has many **oranges**.

# Schema Design

- What is the relationship between orange trees and oranges?

An **orange tree** has many **oranges**.

An **orange** belongs to an **orange tree**.

# DB Relationships

- Relationships are two way streets
- Should sound like a natural sentence

An **orange tree** has many **oranges**.

An **orange** belongs to an **orange tree**.

# Schema Design

- How to link between tables?

# Schema Design

- How to link between tables?

**Primary key:** unique identifier table field

Every table has autogenerated Primary Keys, unless specifically disabled

**Foreign key:** another table's unique identifier

Only tables which belong to another table contain a Foreign Key

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>diameter</i>
<i>created_at</i>
<i>updated_at</i>

- On which table does the foreign key belong?

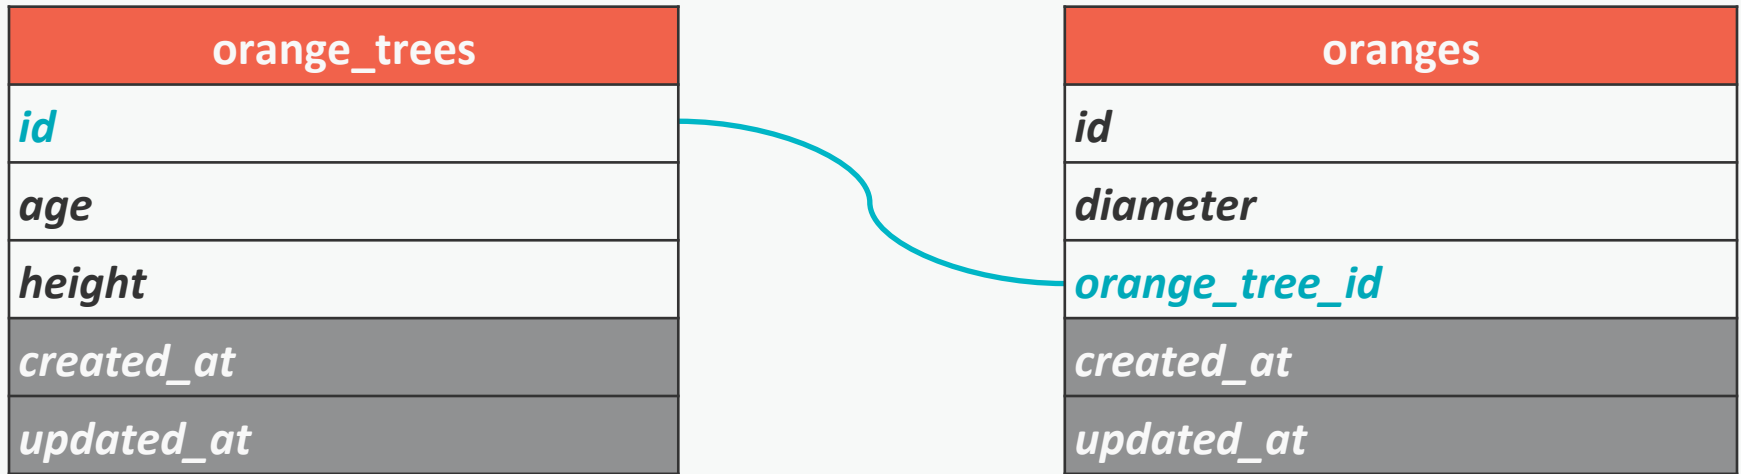

# Schema Design

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>created_at</i>
<i>updated_at</i>

oranges
<i>id</i>
<i>diameter</i>
<i>orange_tree_id</i>
<i>created_at</i>
<i>updated_at</i>

- The foreign key belongs on the table of the objects that are owned

# Schema Design

- The foreign key belongs on the table of the objects that are owned

# Schema Design

orange_trees				
<i>id</i>	<i>age</i>	<i>height</i>	<i>created_at</i>	<i>updated_at</i>
<b>1</b>	<b>5</b>	<b>5</b>	<b>2014-03-22</b>	<b>2014-03-22</b>
<b>2</b>	<b>6</b>	<b>6</b>	<b>2014-03-22</b>	<b>2014-03-22</b>

oranges				
<i>id</i>	<i>diameter</i>	<i>orange_tree_id</i>	<i>created_at</i>	<i>updated_at</i>
<b>1</b>	<b>2</b>	<b>1</b>	<b>2014-03-22</b>	<b>2014-03-22</b>
<b>2</b>	<b>4</b>	<b>2</b>	<b>2014-03-22</b>	<b>2014-03-22</b>
<b>3</b>	<b>3</b>	<b>1</b>	<b>2014-03-22</b>	<b>2014-03-22</b>
<b>4</b>	<b>4</b>	<b>1</b>	<b>2014-03-22</b>	<b>2014-03-22</b>

# Schema Design

# SQL Statements

orange_trees
<i>id</i>
<i>age</i>
<i>height</i>
<i>name</i>
<i>created_at</i>
<i>updated_at</i>

```
CREATE TABLE orange_trees
(
  id integer PRIMARY KEY AUTOINCREMENT,
  age int NOT NULL,
  height int NOT NULL,
  name varchar(255),
  created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,
  updated_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP
);
```

# SQL Statements

oranges
<i>id</i>
<i>diameter</i>
<i>created_at</i>
<i>updated_at</i>

```
CREATE TABLE oranges
(id integer PRIMARY KEY,
diameter integer NOT NULL,
created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,
updated_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP
);
```

# SQL Statements

```
INSERT INTO orange_trees
(age, height, name)
VALUES
(1,10,'Brick'),
(1,15,'Bill'),
(2,22,'Jordan');

INSERT INTO oranges(diameter)
VALUES(3);
```

# SQL Statements

```
SELECT name FROM orange_trees  
WHERE age = 1 AND height < 20;  
  
SELECT * FROM oranges  
WHERE diameter = 3;
```

# SQL && Schema

## Questions
